IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A process for the continuous preparation of a composition compositions comprising silica, said process comprising, forming a melt by melting in a furnace comprising at least two tanks in series, said tanks each comprising at least one burner submerged in the melt, and wherein silica and fluxing agent for the silica are being introduced into the first tank.

Claim 2 (Currently Amended): The process as claimed in <u>claim 1</u> the <u>preceding</u> elaim, <u>wherein</u> characterized in that at least 90% of the silica and at least 90% of the fluxing agent for the silica are introduced into the first tank.

Claim 3 (Currently Amended): The process as claimed in claim 2 the preceding elaim, wherein characterized in that the furnace is fed with a thinner, at least 90% of which is introduced into the second tank of the furnace.

Claim 4 (Currently Amended): The process as claimed in <u>claim 1</u> one of the preceding claims, <u>wherein characterized in that</u> the first tank is heated to a higher temperature than the other tank or tanks of the furnace.

Claim 5 (Currently Amended): The process as claimed in claim 4 the preceding elaim, wherein characterized in that the temperature difference between the first tank and the other tank or tanks is at least 80°C.

3

Claim 6 (Currently Amended): The process as claimed in claim 5 the preceding elaim, wherein characterized in that the first tank is heated to a temperature ranging from 1230 to 1350°C, and in that the other tank or tanks are heated to a temperature of at most 1150°C.

Claim 7 (Currently Amended): The process as claimed in claim 1 one of the preceding claims, wherein characterized in that the a final composition comprises 10 to 70% SiO₂, by weight, 0.3 to 30% Na₂O₃ by weight, 5 to 30% B₂O₃, by weight, and 0.3 to 35%, by weight, of at least one oxide of a metal other than Si, Na and B.

Claim 8 (Currently Amended): The process as claimed in claim 7 the preceding elaim, wherein characterized in that the final composition is a frit, comprising 40 to 70% SiO₂, by weight, 20 to 30% Na₂O₃ by weight, 5 to 15% B₂O₃, by weight, and 3 to 20%, by weight, of at least one oxide of a metal other than Si, Na and B.

Claim 9 (Currently Amended): The process as claimed in <u>claim 7</u> either of the preceding claims, <u>wherein characterized in that</u> the metal is <u>selected chosen</u> from chromium, cobalt, copper, nickel, selenium, zirconium, titanium, manganese, praseodymium, iron <u>or and zinc.</u>

Claim 10 (Currently Amended): The process as claimed in <u>claim 1</u> one of the preceding claims, <u>wherein characterized in that</u> at least one oxide of a metal is introduced into the second tank of the furnace.

Claim 11 (Currently Amended): The process as claimed in claim 10 the preceding elaim, wherein characterized in that the furnace comprises at least three tanks in series, the second being heated to a temperature ranging from 1000° to 1150°C, and the third to a temperature ranging from 900° to 1000°C.

Claim 12 (Currently Amended): The process as claimed in <u>claim 11</u> the preceding elaim, wherein characterized in that the oxide has several oxidation states, and in that the submerged burner(s) of the third tank has/have a sufficiently oxidizing flame for the oxidation state of the oxide to be raised on going, from the second to the third tank.

Claim 13 (Currently Amended): The process as claimed in <u>claim 1</u> one of the preceding claims, <u>wherein</u> characterized in that the composition is a color frit or a tile frit or an enamel.

Claim 14 (Currently Amended): A tile frit, obtained by the process of claim 1 one of the preceding claims.

Claim 15 (Currently Amended): A furnace for the continuous melting of a composition comprising silica, said furnace comprising at least two tanks in series, said tanks each comprising at least one burner submerged in a the melt.

Claim 16 (Currently Amended): The furnace as claimed in <u>claim 15</u> the preceding elaim, wherein said furnace characterized in that it comprises at least three tanks in series.

Claim 17 (Currently Amended): The furnace as claimed in <u>claim 15</u> one of the preceding furnace claims, <u>wherein</u> characterized in that two of the tanks each comprise separate charging means.

Claim 18 (Currently Amended): A plant for the preparation of glass compositions, comprising the a furnace of claim 15 one of the preceding furnace claims, followed by a feeder or a fining zone.
